

pattern, and the half-millimeter difference allows the gas pressure to be further increased.

Thus, the Super 9 has to be clear: it is a weapon for the shooter who wants to milk both roses and move on the path of dynamic shooting.

Description

The PC945 launched last year was a 'licked' gun, with its skeleton trigger, skid tensioning surfaces on the sled and extended pallets and levers. The Super 9 looks a bit more modest. At the outset, the weapon has far removed from the classic Smith & Wesson double-action models, such as the 910 and 410. Like these guns, the Super 9 has a one-piece plastic grip, locking of the race in the sledge and a safety guard the left side of the carriage. In further consideration, the differences differ. The Super 9 has an extended sleigh and a longer run (127mm instead of 102mm), a less curved tractor, which has been rearranged due to the single-action mechanism, and a fully adjustable target. More high tech gadgets can not be found, and the choice of material is also the case

The complete package includes a gun and three runs, respectively in 9 mm Para, 9x21 and .356 TSW. The constriction near the mouth is necessary to get the walk out of the tightly fitting bus.

Super 9 a gun without much frills.

The plastic grip left is the case of solid steel. That of course also means a heavy weight. Unloaded brings the weapon 1106 grams to the scale.

The Super 9 is not only a fairly heavy but also a pretty big gun. The warehouse capacity is fifteen patterns in all three calibers. That creates a strong closet. Nevertheless, the one-piece plastic grip holds the dimensions

the limits. The equipment includes dot-sights and a fully adjustable keep.

Practice

A pistol that can only trigger three different patterns by a single-handed fishing instructor, of course, requires a comprehensive test. A number of questions can be asked in this phenomenon. Can one and the same warehouse be the

The Super 9 has a fully adjustable retainer and partially hollowed hammer.

Technical data

Model	S&W Super 9
Caliber	9 mm Para/9x21/.356 TSW
Length	216 mm
Barrel Length	127 mm
Mass	1106 gram
Stockroom	15 patterns

Fit patterns well despite their different sleeve lengths? Let one and the same closing spring repeat the weapon without problems, despite the differences in gas pressure? But unfortunately, the answer to these questions should be guilty of you. A combination of lack of time and other non-contributory causes made it possible to report only
